Table of Contents - Module Catalogue (Appendix 2)

1st Semester	
Principles of Business Administration for Business Information Systems (5 MG 98)	14
Financial Accounting and Corporate Finance (5 CFR 93)	15
Principles of Computer Science (5 WIP 22)	17
2nd Semester	
Cost Accounting and Corporate Investment (5 CFR 94)	18
Databases (5 WIP 24)	20
System Development (5 WIP 25)	22
3rd Semester	
Communication and Project Management (5 WIP 29)	24
Software Engineering (5 WIP 27)	
Mathematics for Business Information Systems (5 M/S 93)	27
4th Semester	
Software Project (5 WIP 28)	
Web Technologies (5 WIP 13)	
Materials Management and Production Planning and Monitoring (5 WIP 23)	
Mathematics for Economists (5 M/S 91)	31
5th Semester	
Networks (5 WIP 12)	32
English for Business Information Systems (5 SP 94)	
Technology of Enterprise Resource Planning Systems (5 WIP 26)	
Concepts and Technologies in E-Commerce (5 WIP 14)	36
6th Semester	
IT Systems and Security (5 WIP 11)	
Seminar on Business Information Systems (5 WIP 15)	39
7th Semester Bachelor Thesis (5 WIP 49)	4.0
Bachelor Thesis (5 WIP 49)	40
Work-Related Modules	
Work-Related Module I (5 WIP 40)	11
Work-Related Module II (5 WIP 41)	
Work-Related Module II (5 WIP 42)	
Work-Related Module IV (5 WIP 43)	
Work-Related Module V (5 WIP 44)	
Work-Related Module VI (5 WIP 45)	
Work Related Floudic VI (5 WIF 15) IIIIIIIIIIIIIIIIIIIIIIIIIIIIIIIIIII	
Compulsory Elective Modules	
Principles of Controlling (5 CFR 43)	47
Financial Management (5 CFR 44)	
Annual Accounts and Analysis (5 CFR 45)	
Principles of Marketing (5 MKT 21)	50
Buyer Behaviour and Marketing Research (5 MKT 31)	51
Brand and Communication Management / Channel Management and Pricing (5 MKT 32)	53
Digital Marketing / Strategic Marketing and Sustainability (5 MKT 33)	55
Leadership (5 P/O 01)	57
Human Resources I (5 P/O 32)	
Employment Law (5 P/O 33)	
Human Resources II (5 P/O 35)	
Principles of Logistics (5 P/L 38)	
Logistics Systems (5 P/L 31)	
Production Planning (5 P/L 34)	
Economic Private Law (5 RE 23)	
Organisation and Management (5 MG 07)	65

Corporate Entrepreneurship (5 MG 32)	66
Business Plan (5 MG 33)	
Entrepreneurship (5 MG 34)	
Corporate and Tax Law Fields of Action for Entrepreneurs (5 StU 51).

Financial Accounting and Corporate Financing							Module ID 5 CFR 93	
No.	Workload	Credits	Study semester	Frequency	Sem.	Dura- tion	Туре	Q-level
	150 h	6	1st sem.	Annual	Winter	1 sem.	Compulsory	B.Sc.
1	Course type		Contact time	Self- study	Forms of teaching (learning methods)		Planned group size	Language
	Lecture		4 SCH/60 h	90 h	Lecture exerci		60	German

On successful completion of the module, students have the following knowledge and skills:

After successfully completing this module, students are able to:

- describe the value creation process in the company using the value chain from both an accounting and an information perspective,
- map the operational value creation processes using an ERP system (enterprise resource planning) and explain their structure,
- explain and practice the principle techniques of bookkeeping, in accordance with legal regulations and practice financial bookkeeping, both by traditional means and with an ERP system,
- develop accounting records for a wide variety of real situations and thus perform bookkeeping for the most important functional areas in companies,
- prepare annual financial statements in accordance with the German Commercial Code, depending on the legal form,
- analyse, interpret and evaluate annual financial statements in part,
- name and explain detailed terms in financing,
- identify different forms of corporate financing and integrate them into the financial decision-making process.

All learning outcomes are based, amongst other things, on the practiced handling of the applicable legal standards for accounting, and preferably commercial law (HGB).

3	Contents
3	Contents a) Introduction to the corporate value chain • Relationships between businesses' functional areas • Outline of the value chain • Introduction to the process-oriented view in using ERP systems to support the value chain of a company • Architecture and technical principles of ERP systems b) Introduction to Financial Accounting • Tasks and structure of financial accounting • Basic accounting terms • Legal regulations and organisation c) Introduction to accounting techniques • Central elements of financial accounting • Business transactions that do not affect profit or loss • Relevant master data for accounting in ERP systems d) Transactions in important areas of the company • Procurement (goods and capital goods) • Production • Sales • Human resources e) Preparation of annual financial statements • Specific questions of evaluation according to commercial law • Accrual • Preparing the legal statement (Balance and P&L) in accordance with German regulations f) Corporate Financing • Foundations; tasks, principles and procedures of financial planning
	 Different forms of financing Approaches to optimising the financing and capital structure
4	Participation requirements None
5	Form of assessment
	Written examination or oral examination
6	Condition for the award of credits Module examination pass
7	Application of the module (in the following study programmes): Business Information Systems (B.Sc.)

On successful completion of the module, students have the following knowledge and skills:

- They know the principles of object-oriented programming and its implementation in the Java programming language.
- They know the type system, control structures, exception handling and the object concept in Java.
- They are able to design simple algorithms and programme them in Java.
- They are able to implement and test programmes using a development environment
- They are able to explain the properties of different models of data modelling and can use the data models to design specific application scenarios.
- They are able to implement a data model using an actual database system.
- They are proficient in the SQL language and can manipulate databases and formulate complex inquiries.

Contents 3

Programming

- Principles of programming
- Elements of the Java programming language
- Control structures
- Object-oriented programming in Java
- Programming tools
- ECLIPSE development environment

Data modelling

- Conceptual data modelling
 - Entity-relationship (ER) model
 - Extensions to ER models
 - Object-oriented data models
- Theoretical principles
 - Calculi of the database theory 0
 - Algebra relations
 - Regular expressions
- Logical data modelling
 - Relational model concepts
 - Principles of SQL XML

Participation requirements 4

None

Form of assessment

Written examination or oral examination

6	Condition for the award of credits Module examination pass
7	Application of the module (in the following study programmes): Business Information Systems (B.Sc.)
8	Module coordinator Prof. Dr. Peter Hartel
9	Other information -

	Cost Accounting and Corporate Investment							Module ID 5 CFR 94
No.	Workload	Credits	Study semester	Frequency	Sem.	Dura- tion	Туре	Q-level
	150 h	6	2nd sem.	Annual	Summer	1 sem.	Compulsory	B.Sc.
1	Course type		Contact	Self-	Forms of teaching (learning methods)		Planned	Language
			time	study	(lear	ning	group size	Language

On successful completion of the module, students have the following knowledge and skills:

After successfully completing this module, students are able to

- map the integration of cost accounting and financial accounting in the ERP system,
- name and explain reference models (data, process and function models) within the framework of ERP systems,
- define the essential terms and possible applications of cost accounting,
- name and explain the procedures of the three levels of cost accounting,
- apply cost accounting methods to practical tasks in the ERP system,
- assess the decision-making relevance of the results of different cost accounting systems,
- name and explain detailed terms in corporate investment decisions,
- assess investment decisions in practice with regard to their contribution to the corporate goals, while taking into account how risk-adverse the decision-maker is and the information situation, and derive recommendations for management.

3 Contents

- Architecture of ERP systems
- Reference models of ERP systems
- Integration principles of application systems
- Principles of cost accounting (tasks, goals, terms)
- Types of accounting and cost allocation
- Cost accounting systems on a full cost basis
- Cost accounting systems on a partial cost basis
- Insight into further cost accounting systems
- Principles and types of investment decisions; tasks, principles and procedures of
 investment planning and calculation; dynamic investment calculation methods (including
 net present value, internal rate of return and annuity method); static methods of
 investment calculation (e.g. cost, profit, profitability and amortisation comparison
 calculation); determination of the optimal service life and resolution of the replacement
 problem.

4 Participation requirements

None

5 Form of assessment

Written examination or oral examination

6 Condition for the award of credits

Module examination pass

7 Application of the module (in the following study programmes):

Business Information Systems (B.Sc.)

8 Module coordinator

Prof. Dr. Volker Wiemann

9 Other information

	Databases							Module ID 5 WIP 24
No.	Workload	Credits	Study semester	Frequency	Sem.	Dura- tion	Туре	Q-level
	150 h	6	2nd sem.	Annual	Summer	1 sem.	Compulsory	B.Sc.
1	Course type		Contact time	Self- study	Forms of teaching (learning methods)		Planned group size	Language
					-	_		

After successful participation in the course, students are able to:

- explain the most important functions of database management systems,
- assess the benefits of database systems in a project,
- create a database application, taking into account the transaction concept on the basis of different implementation concepts,
- utilise access rights and views for data protection,
- explain and evaluate the phases of data warehousing and the reference architecture of a data warehouse,
- apply the multidimensional data model, associated analysis operations and notations of conceptual modelling with a modelling tool,
- design the relational storage (star, snowflake schema) of the multidimensional data model,
- assess the use of NoSQL databases against the background of Big Data applications.

3 Contents

Assignment of rights and access control

- · Security models
- · Assignment of rights in SQL

Database integrity and triggers

- Architectures for securing integrity
- Classification of integrity conditions
- · Integrity conditions in SQL
- Integrity assurance through triggers

Big data, data warehousing and OLAP

- NoSQL databases
- Development of analytical information systems
- Data warehouse architecture
- Data warehouse modelling and design
- OLAP concepts and operations
- ROLAP (Relational online analytical processing),
 MOLAP (Multidimensional online analytical processing),
 HOLAP (Hybrid Online Analytical Processing)

Data mining

- Classification
- Data mining techniques
- Association rules
- Sequence analysis

Database programming

- JDBC (Java Database Connectivity)
- Database programming frameworks

Database design

- Logical database design
- Functional dependencies
- Normalisation

Transactions

- Concurrency and anomalies
- ACID (atomicity, consistency, isolation, and durability) properties of transactions
- Execution plans and serialisability

4 Participation requirements

Formal: none

Content: participants are expected to have previous knowledge in the areas of programming, data modelling and SQL, as taught in Module 5 WI 22 (Principles of Computer Science).

5 Form of assessment

Written examination or oral examination

6 Condition for the award of credits

Module examination pass

7 Application of the module (in the following study programmes):

Business Information Systems (B.Sc.)

8 Module coordinator

Prof. Dr. Peter Hartel

	System Development							Module ID 5 WIP 25
No.	Workload	Credits	Study semester	Frequency	Sem.	Dura- tion	Туре	Q-level
	300 h	12	2nd sem.	Annual	Summer	1 sem.	Compulsory	B.Sc.
1	Course type		Contact time	Self- study	Forms of teaching (learning methods)		Planned group size	Language
	Lecture Exercise		4 SCH/60 h 4 SCH/60 h		Sem. lessons Case studies/task processing		60 20	German German

On successful completion of the module, students have the following knowledge and skills:

- They are able to explain the principles of process management.
- They are able to define operational procedures as processes.
- They are able to map processes as a process model in the BPMN (Business Process Model and Notation) language.
- They are able to elaborate on and explain essential elements of a process model in BPMN.
- They are able to define and explain the basic terms of software engineering.
- They are able to explain and apply different approaches in software engineering.
- They are able to collect and define requirements for a software system and model them as use cases and use case diagrams.
- They are able to model application domain concepts in domain class diagrams and derive sequence diagrams from use cases.
- They know the Java programming language and can use it to solve complex problems.
- They are able to implement systems using dynamic data structures.
- They are able to implement user interfaces.

3 Contents

System analysis

- Process management in business information systems
 - Concept of a business process
 - Modelling business processes with the BPMN language
 - Application of modelling tools for business processes
 - Principles of process automation and process optimisation
- Principles of software engineering (SE)
 - Definition of terms
 - o Properties of software
 - Motivation and history of SE
 - Principles, languages, methods and tools of SE
- Organisation of development projects
 - Software development tasks
 - o Process models
 - Project organisation
- Definition of requirements for a software system
 - Scope of tasks
 - Classification of requirements
 - Specification sheet
 - Prototyping
 - Use cases and use case diagrams
 - Domain class diagrams
- Creation of an analysis model of the software system
 - o Creating system sequence diagrams
 - o Analysis class diagram

Programming

- · Class hierarchies
 - $\circ \quad \text{Inheritance and polymorphism} \\$
 - o Interfaces
 - o Packages
- Standard input/output
 - o Console input and output
 - o Files and persistence
 - o Standard class library
- Error and exception handling
 - o Error classes
 - o Exceptions and inheritance
- Dynamic data structures
 - o Classes of the collection framework
 - Generics
 - o Iterator concept
- Client-server architectures
 - Networking
 - o Basic concepts of cloud-based software
- User interfaces
 - o Structures of modern user interfaces
 - o Event-driven programming, inversion-of-control
 - UI Controls
 - o Layout and design

4	Participation requirements
	Formal: none
	In terms of content: Participants in the course are expected to be proficient in the concept of algorithms, know the elementary data and control structures of programming, and to be confident in handling data modelling methods. This is the classic content of the introductory course "Principles of Computer Science."
5	Form of assessment Written examination or oral examination
6	Condition for the award of credits
	Module examination pass
7	Application of the module (in the following study programmes): Business Information Systems (B.Sc.)
8	Module coordinator
	Prof. Dr. Jochen Küster, Prof. Dr. Alexander Förster
9	Other information

	Communication and Project Management							
No.	Workload	Credits	Study semester	Frequency	Sem.	Dura- tion	Туре	Q-level
	150 h	4	3rd sem.	Annual	Winter	1 sem.	Compulsory	B.Sc.
1	Course type		Contact self- Forms of teaching (learning methods)		ng ng	Planned group size	Language	
	Lecture Exercise		2 SCH/30 h 2 SCH/30 h		Lecture Case studies/ task processing		60 20	German German

On successful completion of the module, students have the following knowledge and skills:

- They can successfully prepare, plan and carry out projects in an IT context.
- They are familiar with the central concepts of IT service management.
- They are able to discuss essential communication models and techniques, as well as forms of conversations, and apply these in the context of conversations.
- They are able to describe conflict types and levels and lead negotiations to resolve the conflict.

In addition, they are able to analyse and evaluate practical problems and ultimately derive recommendations for actions, in which, in addition to business information systems aspects, ethical and social issues are also taken into account.

They are able to reflect the relationships between scientific findings, complex situations and their own roles. In terms of engagement in society, students have an understanding of communication, negotiation and conflict resolution, and can apply this accordingly.

3 Contents

Communication skills:

- Interview techniques
- Feedback and active listening
- Communication models (iceberg model, four-ears model, transaction analysis, TCI)
- Communication types in IT projects

Project management (PM):

- Principles of general PM
- Special features of IT projects
- Project goals
- Project organisation
- Stakeholder and risk management
- Effort estimation, cost management, project controlling, change requests
- Project agreements

Conflict management:

- Types and levels of conflicts
- Conflict resolution techniques in IT projects, crisis management

IT service management

- Necessity and principles
- Overview: books, processes, roles and organisation units of ITIL (IT Infrastructure Library)
- In detail: IT operations management processes according to ITIL

4 Participation requirements

None

5 Form of assessment

Written examination or oral examination or a combination of project work and written examination

6 Condition for the award of credits

Module examination pass

7 | Application of the module (in the following study programmes):

	Lecture Exercise		2 SCH/30 h 2 SCH/30 h		Lecture Case studies/task processing		60 20	German German	

On successful completion of the module, students have the following knowledge and skills:

- They are able to define and explain the basic concepts of software design.
- They are able to systematically derive an analysis class diagram from the requirements by using sequence diagrams.
- They are able to explain the principles of software architecture.
- They are able to explain essential architectural patterns and apply them in software design.
- They are able to explain essential design patterns and apply them in software design.
- They are able to define and explain the basic terms of quality assurance.
- They are able to explain essential test procedures and apply them in system development.

3 Contents

- Creation of an analysis model of the software system
- Creation of analysis sequence diagrams and analysis class diagrams
- System design
- Component design
- General design concepts
- Object-oriented design concepts
- Transformation of business requirements
- Creation of an analysis model of the software system
- System sequence diagrams and analysis sequence diagrams
- Analysis class diagram
- Modelling of software architectures
- Model and code generation
- Software quality
- Preparation of integration and test plans
- Test methods
- Quality assurance
- Configuration management

4 Participation requirements

After successfully completing the module, students are able to develop a suitable information system for a complex task as part of a project team. They have the following knowledge and skills:

- They are able to analyse and plan a complex project task.
- They are able to develop a software system, from the requirements analysis up to final implementation.
- They know all the development phases that must be carried out as part of a software project and can create the necessary documents.
- They are able to apply the skills acquired in the first two semesters from the areas of programming, databases and software engineering in an extensive software project.

In addition, they are able to analyse and evaluate practical problems and ultimately derive recommendations for action, in which, in addition to business information systems aspects, ethical and social issues are also taken into account.

They are able to reflect on the relationships between scientific findings, complex situations of action and themselves. In terms of civic engagement, these students have an understanding of communication, negotiation and conflict resolution and can apply it accordingly.

3 Contents

Students develop a software system in teams of 4–6 people. The exact form of the assignment varies from semester to semester. The focus here is on creating, expanding or migrating an application system that is deployed in a business context. Techniques from the areas of programming, software engineering and database systems are to be used for implementation. In addition to the very small-scale training in software technology in the first two semesters, the focus here is on large-scale programming, i.e. modelling, modularisation, object orientation, use of libraries, tools, teamwork, documentation, etc.

4 Participation requirements

Formal examination requirements: Students must have passes in modules 5 WIP 25 (System Development) and 5 WIP 24 (Databases).

5 Form of assessment

Project work

6 Condition for the award of credits

1	Course type		Contact time	study	Forms of to (learning methods)	eaching	Planned group size	Language
	Lecture Exercise		2 SCH/30 h 2 SCH/30 h		h Lectur Case stud task proce		60 20	German German

After successfully completing this module, students are able to:

- determine the different types of business and classify suitable methods in terms of the characteristics scheme within the framework of production planning and control,
- derive and describe necessary master and movement data for production planning and control,
- determine suitable forecasting methods for typical industries and products,
- explain and evaluate different disposition types and procedures,
- carry out material requirements planning (MRP) in the ERP system and apply the results (planned orders),
- describe the basic administrative handling of production orders, from initiation to confirmation,
- name and explain the steps in the procurement process,
- trace the order flow in sales, production, materials management and logistics on an ERP system,
- recognise and evaluate integration with other operational systems (e.g. CRM (Customer Relationship Management), SCM (Supply-Chain Management), MES (Manufacturing Execution Systems)),
- define the logistical processes associated with production processes.

3 Contents

Principles

- Definition of production, typological company diagram
- Master and movement data for production planning and control
- Reference models for production planning and control
- Elements of production programme planning, production requirements planning, production management, procurement

Concepts of materials management and production planning in ERP systems

- Sales planning within the framework
- Production programme planning, MRP (material requirements planning), consumption-based scheduling
- Capacity planning and alignment
- Production management, MES
- Logistics systems, SCM in contrast to ERP systems and interfaces

4 Participation requirements

On successful completion of the module, students have the following knowledge and skills:

Students are able to

- · name the most important common protocols,
- · explain their tasks and their structure,
- · describe the interaction of the protocols,
- · cable and configure simple local networks,
- name the components of network security architecture,
- explain their mode of operation and effectiveness.

3 Contents

Principles of networking

The ISO/OSI layer model

Local networks

- Ethernet

	Sem. lessons		4 SCH/60 h	90 h	Case studies, project and teamwork with coaching		60	English	

On successful completion of the module, students have the following knowledge and skills:

- They are able to express themselves orally and in writing in a corporate environment.
- They are able to extract specific information from research publications.
- They are able to prepare and create professional presentations and media on specialist topics in English.
- They are reasonably proficient in English to the extent that they can confidently handle teamwork, presentations, project reports and meetings.

In addition, they are able to analyse and evaluate practical problems and ultimately derive recommendations for action, in which, in addition to business information systems aspects, wider societal aspects are also taken into account.

They are able to reflect on the communication of scientific findings, on corporate and social problems and relevant IT-based support tools and their own role in the process.

On successful completion of the module, students have the following knowledge and skills:

- They are able to define the terms e-commerce and e-business and describe their current meaning.
- They are able to create a database-based server application with PHP.
- They are able to design and implement interfaces in e-commerce.
- They are able to design a website and implement it with a content management system.
- They are able to explain basic legal regulations in e-commerce.
- They are able to select, install, configure and operate tools in e-commerce.

On successful completion of the module, students have the following knowledge and skills:

Students are able to

- name the most important hardware components of a computer,
- · explain their structure and functionality,
- describe the tasks and mode of operation of operating systems,
- explain the tasks of systems support,
- · act in a security-conscious manner,
- understand and assess security measures.

On successful completion of the module, students have the following knowledge and skills:

They are able to work independently on a current topic in business information systems, present and discuss the topic in a scientific talk, and prepare it in the form of a written paper.

They are familiar with the principles of scientific work and are able to implement them in the context of a scientific paper.

They are proficient in communication and presentation techniques and can apply them in a specialist talk.

3 Contents

The themes dealt with differ from those on other courses by their topicality. In particular, themes that reflect the current state of research are dealt with. As an example, seminar topics from the following subject areas may be offered:

- Software Engineering
- Databases
- Information systems
- ERP systems
- Network technology
- IT security
- E-commerce

On successful completion of the module, students have the following knowledge and skills:

They are able to apply the specialist knowledge acquired during the previous course in operational practice and transfer it to specific tasks in operational practice.

In addition, they are able to analyse and evaluate practical problems and ultimately derive recommendations for action, in which, in addition to business information systems aspects, ethical and social issues are also taken into account.

They are able to reflect on the relationships between scientific findings, complex situations of action and themselves. In terms of civic engagement, these students have an understanding of communication, negotiation and conflict resolution and can apply it accordingly.

3 Contents

In the so-called "short" work-related module, students are introduced to the professional activities of a business information systems specialist through practical work in a business. Based on the contents of the course of study previously imparted in the academic terms, the students should be confronted with the requirements of operational practice. They are given the opportunity to make observations and gain practical experience and, if necessary, are given scope for their own decision-making. Instruction in practical work is provided by an in-company supervisor, with the support of teaching staff if necessary.

The internship includes the following central elements:

- a) Agreement on the terms of the internship and preparatory discussions with the in-company supervisor
- b) Accompaniment of the internship by an in-company supervisor and needs-oriented support by a member of teaching staff
- c) Evidence of practical activity through listing the activities carried out in a table (proof of the implementation of the "short" internship).
- d) Final meeting with the in-company supervisor

4 Participation requirements

Compulsory participation after the academic term of the first semester.

5 Form of assessment

Requirements for the award of credit points are governed by the Examination Regulations. Cf. Section 18 (3) SPO.

On successful completion of the module, students have the following knowledge and skills:

They are able to apply the specialist knowledge acquired during the previous course in operational practice and transfer it to specific tasks in operational practice.

In addition, they are able to analyse and evaluate practical problems and ultimately derive recommendations for action, in which, in addition to business information systems aspects, ethical and social issues are also taken into account.

They are able to reflect on the relationships between scientific findings, complex situations of action and themselves. In terms of civic engagement, these students have an understanding of communication, negotiation and conflict resolution and can apply it accordingly.

3 Contents

In the so-called "long" work-related module, students have to work on specific projects/questions in the context of business information systems. Individual problems should be examined and resolved holistically.

The procedure and results of the project/question are documented and graded according to the rules of the techniques of scientific work.

The topics to be dealt with must be related to business information systems and based on the module content of the curriculum.

The subject is approved by teaching staff at the suggestion of the student. The faculty tutor guides the students with the support of the in-company supervisor and oversees the course.

The internship includes the following central elements:

- a) Internship and preparatory talks with the in-company supervisor
- b) Internship and preparatory talks with the faculty tutor
- c) Topic definition (based on proposals determined in preliminary discussions) by the faculty tutor
- d) Accompaniment of the internship by the in-company supervisor and the faculty tutor
- e) Preparation of a term paper by students
- f) Final meeting with the in-company supervisor
- g) Grading and final interview with the supervising professor

	Sem. lesso	ns	4 SCH/60	h 90 h	Lecture, studies, ex group	cercises,	35	German					

On successful completion of the module, students have the following knowledge and skills:

Buyer behaviour

- They know the essential parts of the brain, their functions and the sensory system and can derive and understand the context and significance for buyer behaviour.
- They are able to determine the intrapersonal determinants of buyer behaviour (e.g. activation, motives, attitudes, satisfaction, perception, learning) and the interpersonal determinants (e.g. affinity groups, influencers) and can derive, analyse and evaluate the relevance of these determinants to explain the triggered buyer behaviour.
- They are able to derive, analyse and further develop the implications of the explanatory approaches of buyer behaviour for the design of marketing stimuli.
- They are able to analyse and evaluate buyer behaviour in organisations based on specific aspects of industrial purchasing decisions and the buying centre approach.

Marketing research

- They are familiar with the measurement levels and their properties as well as the quality criteria for assessing measured data. They are familiar with essential scaling procedures and can analyse and critically reflect on these and their fields of application.
- They are able to measure the relevant psychological reactions (e.g. activation, motives, attitudes, satisfaction, etc.) and can apply, analyse and assess these in the context of market research.
- They are able to present selection procedures, as well as the surveying, observation and
 experimenting methods as well as special forms (e.g. panel, neuroscientific methods), and
 analyse and evaluate these for research into marketing issues.
- They are able to apply selected methods of uni-, bi- and multivariate data analysis and analyse and evaluate results of marketing research.

3 Contents

Buyer behaviour

- The discovery, use and rationale of buyer behaviour research
- Essential neuroanatomical structures and their significance for buyer behaviour
- Importance of the sensory system for buyer behaviour
- Intrapersonal determinants of buyer behaviour
- Interpersonal determinants
- Purchasing behaviour of companies
- Selected implications of the insights for marketing

Marketing research

- Marketing research as a make-or-buy decision
- Measurement and scaling
- Measurement approaches of intrapersonal determinants
- Non-random and random selection procedures
- Methods of information acquisition (secondary research, survey, observation, experiment, special methods)
- Information evaluation (uni-, bi-, multivariate evaluation methods)

4 Participation requirements

A basic knowledge of marketing is recommended.

5 Form of assessment

Written examination or oral examination

6	Condition for the award of credit points Module examination pass
7	Application of the module (in the following study programmes): Business Administration (B.A.), Business Information Systems (B.Sc.), Business Administration (work-integrated) (B.A.)
8	Module coordinator Prof. Dr. Kerstin Stender-Monhemius
9	Other information -

Brand and Communication Management / Channel Management and Pricing											
No.	Workload	Credit points	Study semester	Frequency		Sem.	Dura- tion	Туре	Q-level		
	150 h	6	6th or 7th sem.	Bi-annual		Winter/ Summer	1 sem.	Compulsory elective	B.Sc.		
1	Course type		Contact time	Self- study		Forms of teaching (learning methods)		Planned group size	Language		
	Sem. lessons		4 SCH/60) h 90 h		Lecture		35	German		

In terms of brand and communication management, students are able to

- classify the terms and concepts of brand policy within the product policy context
- create brand and communication policy concepts with objectives, strategies and measures, analyse existing concepts and critically examine them
- derive brand, product and communication policy objectives, classify them in the target system and operationalise them
- present, analyse and evaluate strategic and operational programme planning options, brand strategies and methods for product variation, differentiation, elimination
- present, analyse and evaluate the importance of innovation management for companies as well as the phase-specific content of the innovation management process
- derive, analyse, evaluate positioning and communication strategies
- explain, analyse and evaluate the concepts of communication policy instruments
- present, analyse and evaluate the concepts and methods for determining, distributing the communication budget and designing communicative messages
- derive and analyse key performance indicators for controlling brand, innovation and communication management.

Channel management, e-commerce and pricing:

- They know the basics of e-commerce and can present and analyse the essential business models. They are able to assess the importance of e-commerce, know the current framework conditions, developments and special features. They are able to explain relevant market forms and players.
- They are able to explain key concepts of multi-channel sales, such as the systematisation of sales channel alternatives and cross- and omni-channel management. They are able to select problem- and case-based sales channels and assess the opportunities and risks of multi-channel sales.
- They are able to present and analyse key aspects of customer experience management, such as transaction process design, usability or user experience.
- They are able to explain and interpret key metrics for measuring success and optimising e-commerce. They are able to classify them into the corporate and marketing target system.
- They are able to explain and analyse key pricing strategies. They are able to relate them to the overall marketing and business strategy.
- They are able to present central pricing approaches and apply them to concrete case studies. These include, for example, behavioural and dynamic pricing.

3 Contents

Brand and communication management

- Objectives, strategies and instruments of product and brand policy
- Objectives, strategies and instruments of communication policy
- Determination and distribution of the communication budget; design of the communication message
- Key figures for controlling brand, innovation and communication management

Multi-channel management, e-commerce and pricing

- Basic e-commerce models
- Omni-, cross- and multi-channel management
- Customer experience management
- Controlling and conversion measurement
- Pricing strategies

	Selected pricing approaches
4	Participation requirements A basic knowledge of marketing is recommended.
5	Form of assessment Written examination or oral examination or a combination of written examination and oral presentation
6	Condition for the award of credit points Module examination pass
7	Application of the module (in the following study programmes): Business Administration (B.A.), Business Psychology (B.Sc.), Business Administration (work-integrated) (B.A.), Business Information Systems (B.Sc.)

Digital and social media marketing

- They are familiar with the essential framework conditions, developments and
 particularities of the digital marketing environment and their influence on buyer
 behaviour. They are able to explain and apply key concepts and tools for analysis, such as
 buyer personas and customer journeys. They are able to determine the role and
 importance of key players in the online market environment.
- They are able to integrate digital marketing objectives into the business and marketing target system. They are able to analyse, evaluate and develop digital marketing strategies.
- They are able to classify and explain key digital marketing tools in the marketing mix and make choices appropriate for the strategy. This includes, e.g., the digitalisation of products and services, search engine marketing, affiliate marketing or online advertising.
- They are able to present and explain the basics of social media marketing. They are familiar with current developments and essential forms of social media. They are able to assess the current challenges and the advantages and disadvantages of social media marketing. They are able to explain key social media marketing tools and make casebased selections.
- They are able to describe and analyse key concepts of customer retention through social media. They are also able to explain the key instruments and apply them to specific cases.

Strategic marketing and sustainability

- They know the basics of the concept of strategy and are able to classify it in the context of marketing and sustainability.
- They know the tools and models of strategic analysis as well as sustainability and can transfer them to operational practice.
- Based on the results of the analysis and forecasting phase, they can design strategic marketing objectives and classify them into the target system of the company.
- They are able to develop and locate sustainability goals in the company's target system.
- At company and business unit level, they know strategy concepts and can develop and evaluate them with regard to customers, competitors, stakeholders.
- Elements of sustainability and stakeholder orientation are taken into account in the development of marketing strategies.
- They are able to develop a sustainable marketing and business concept based on the Business Model Canvas.

	Sem. lessons 4 SCH/60 h 90 h Lecture, exercise, group work, case studies								German			
2	Learning outcomes/competences On successful completion of the module, students have the following knowledge and skills: • They are able to understand logistical processes both inside and outside the company											

- They are able to understand logistical processes both inside and outside the company and to show the importance of logistics as a cross-sectional task.
- They are able to explain the basic terms and concepts of logistics and supply chain management and distinguish them from one another.
- They are able to apply the concepts and methods discussed in the course and transfer them to operational use cases.
- They are able to compare essential logistics concepts in procurement, production, distribution and disposal and assess which approaches and techniques are best suited to the situation.
- They are able to develop their own solution proposals based on the selection of suitable methods and concepts for specific problems or applications.

3 Contents

In view of the global networking of companies and markets, the design and coordination of spatio-temporal transformation processes are becoming increasingly important. Today, logistics is seen as a cross-divisional function that is required in all phases of the goods economy transformation process. The task of logistics is to coordinate the material and information flows associated with the exchange of services, which are used to link internal and external stages in the value chain. On the one hand, the areas of procurement logistics, production logistics, distribution logistics and disposal logistics are dealt with in accordance with the value chain and based on the goals and tasks of logistics. On the other hand, there is an integrated consideration of company-wide value creation activities within the framework of supply chain management. In this, the basic interrelationships are shown and application-related, selected conceptual and quantitative models are deployed as solution methods for strategic and operational logistics tasks. The contents of the lecture are consolidated and discussed on the basis of exercises.

4 Participation requirements

A basic knowledge of production and logistics is recommended.

Form of assessment

Written examination or oral examination

Condition for the award of credit points

Module examination pass

Application of the module (in the following study programmes):

Business Administration (B.A.), Business Administration (work-integrated) (B.A.), Business Information Systems (B.Sc.)

Module coordinator

Prof. Dr. Gerald Oeser

9 Other information

References and learning materials will be made available during the course.

2	Learning outcomes/competences After successfully completing the module, students are able to describe and apply the principles of logistics systems. Students are able to verify the learned principles using practical examples and implement them in practice-oriented projects in companies (e.g. at Miele or Gestamp). They are then able to justify and defend the solutions they have developed in front of management. Students have a well-founded understanding of logistical relationships, which is increased by the factory tours. After participating in the module, students are able to evaluate logistical processes. In addition to the technical and financial aspects, they are able to evaluate the social, humanitarian and employment-law aspects of certain systems.

On successful completion of the module, students have the following knowledge and skills:

- They are able to explain the Lean Startup method.
- They are able to apply the Lean Startup method to open up a new business area.
- They are able to assess what it means to start a company or to initiate one's own project in an existing company.
- They are able to describe real company processes, develop approaches to solving problems in a team, contribute their own ideas and present solutions to company representatives.

3 Contents

How can existing companies behave in an entrepreneurial way? How can new growth areas be occupied? How can start-ups' success concepts be applied in large companies?

In the "Corporate Entrepreneurship" module, the participants, in cooperation with employees from existing companies, find out answers to these questions by developing their own project idea in the context of a company.

First, the relevant branch of the cooperating company is presented and introduced to the Lean Startup method. The teams then develop a project idea and the corresponding solution so that they can present it at the end.

The overall goal is to impart knowledge and skills in terms of identifying business opportunities as well as to develop and implement own business ideas independently.

After successful completion of the module, students are able to:

- Understand and apply relevant content and methods of a business plan,
- Analyse opportunities, risks, market potential and competitive situations,
- · Create new business models, brands and market entry strategies,
- Deal with uncertainty and information overload and evaluate entrepreneurial decisions, as well as
- Work together to develop and adequately present entrepreneurial concepts within the framework of group tasks.

3 Contents

The project work corresponds to the preparation of a business plan for a fictitious or real founding idea. The process includes:

- · Identification of a business idea
- Development of a business model
- Application of design thinking & prototyping, if applicable
- Preparation of the business plan based on the requirements of the EXIST start-up scholarship (incl. analysis of the competitive situation and financial planning)

The module starts with a compact course that imparts the theoretical foundations. The assessment consists of a business plan and one or more (oral) presentations in which the founding idea and the final business plan are to be presented.

The business plan is based on the requirements of the EXIST Start-Up Scholarship. The fictitious or real business ideas are developed and presented during the semester in small groups (2–4 students).

The overarching goal is to impart knowledge and skills with regard to entrepreneurial activities. This basic course presents the foundation of a company as an attractive career choice and promotes awareness of the topic.

After successful completion of the module, students are able to:

- Understand business contexts, and consider entrepreneurship as a career in particular,
- Apply specific entrepreneurship methods and tools such as Business Model Canvas and analyse markets and competitive situations in particular,
- Evaluate entrepreneurial decisions and gain and assess (market) information, as well as
- Develop an individual attitude towards an entrepreneurial activity and adequately assess the probability of success of one's own founding idea in particular.

How do you develop a business idea? What makes for a successful start-up?

In the "Entrepreneurship" module, participants examine the following issues regarding the creation of a business:

- Entrepreneurship as a career choice,
- Recognising business opportunities,
- Developing business ideas and business models,
- Structure and content of business plans,
- Competitive analysis,
- Founding team composition, as well as
- Start-up financing.

First, basic knowledge is imparted and supplemented by case studies, which the students present to each other. The acquired knowledge will be tested in a written examination.

The overall objective is to impart legal and tax knowledge and skills with a focus on the specificities of companies in the start-up and growth phase.

On successful completion of the module, students have the following knowledge and skills:

- They are familiar with the founding requirements of different legal forms and can assess their advantages and disadvantages under corporate law
- They can explain and assess the tax consequences associated with various legal forms in the formation and day-to-day management of the company
- They can apply their knowledge to legal and tax cases by working out problem solutions and analysing their legal consequences

3 Contents

- Commercial and corporate law/legal framework:
 - Relevant legal forms for business founders
 - Requirements for founding and legal form (in selected examples)
 - Forms of participation for entrepreneurs (undisclosed partnerships, disclosed partnerships, management buy-out)
 - Corporate law characteristics of the company forms (corporate bodies, shareholders and managing directors, power of attorney)
 - Forms of capital raising, corporate financing
 - Drafting of employment contracts
 - Selected legal issues:
 - e.g. "Corporate Criminal Law" (OWiG, Act for Strengthening the Integrity of the Economy), executive liability, principles of insolvency law
- Tax law:
 - Tax obligations and compliance with them (principles of the tax code)
 - Income tax consequences of legal forms and taxation of corporate profits
 - Declaration obligations and liability for registration taxes (VAT, income tax)
 - Selected tax issues:
 - e.g. corporate assets vs. private assets, tax consequences of corporate financing, business split-up, loss compensation and loss offsetting, tax support for small and medium-sized enterprises

4 Participation requirements

None

5 Form of assessment

Written examination or oral examination or written presentation or a combination of several of the aforementioned forms of assessment
